SERVICE MANUAL

US Model Canadian Model AEP Model UK Model

Model Name	Using	Similar	Mechanism	NEW
Tape Transp	ort Me	chanism	Туре	TCM-200V30

SPECIFICATIONS

Recording system 4-track 2-channel stereo

Fast-forward and rewind time

Approx. 90 sec. (with C-60 cassette)

AC Bias Signal-to-noise ratio (NAB, at peak level)

Dolby NR switch Cassette	OFF	B-TYPE ON	C-TYPE ON
TYPE IV (Sony METAL-ES)	60 dB	69 dB	75 dB
TYPE II (Sony UX-S)	59 dB	68 dB	74 dB
TYPE I (Sony HF-S)	57 dB	66 dB	72 dB

Total harmonic distortion

1.0% (with Sony METAL-ES cassettes)

Frequency response (DOLBY NR OFF)

TYPE IV cassette (Sony METAL-ES)	20 – 20,000 Hz (±3 dB, IEC) 20 – 16,000 Hz (±3 dB, 0 VU (−4 dB) recording)
TYPE II cassette (Sony UX-S)	20 – 18,000 Hz (±3 dB, IEC)
TYPE I cassette (Sony HF-S)	20 – 17,000 Hz (±3 dB, IEC)

Wow and flutter

±0.09 % W.Peak (IEC) 0.05 % WRMS (NAB) ±0.14 % W.Peak (DIN)

Inputs

Line inputs	Sensitivity	77.5 mV	
(phono jacks)	Input impedance	47 k ohms	

Outputs

Line outputs (phono jacks)		0.32 V at a load impedance 47 k ohms
	Load impedance	Over 10 k ohms

General

Power requirements

Model for Continental Europe 220 - 230 V AC, 50/60 Hz Model for the United Kingdom 240 V AC, 50/60 Hz

- Continued on page 2 -

Power consumption

17 watts

Dimensions Approx. $430 \times 95 \times 360 \text{ mm}$

 $(17 \times 3^3/_4 \times 14^1/_4 \text{ inches}) (w/h/d)$

including projecting parts and controls

Weight Approx. 5.8 kg (12 lb 13 oz)

Supplied accessory

Audio connecting cord (2)

Design and specifications subject to change without notice.

Note

This appliance conforms with EEC Directive 87/308/EEC regarding interference suppression.

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK A OR DOTTED LINE WITH MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

SECTION 1 GENERAL

This section is extracted from instruction manual.

4

SECTION 2 ADJUSTMENTS

1. MECHANICAL ADJUSTMENTS

PRECAUTION

 Clean the following parts with a denaturedalcohol-moistened swab:

record/playback head

pinch roller

erase head

rubber belts

capstan

idler

- 2. Demagnetize the record/playback head with a head demagnetizer.
- 3. Do not use a magnetized screwdriver for the adjustment
- 4. After the adjustmens, apply suitable locking compound to the parts adjusted.

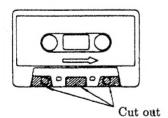

Tape Path Adjustment

Note: When using the adjustment methods for other than replacement reasons, please do not tamper unnecessarily with the adjustment screws or the erasehead because the record/playback head will be made the standard tape paths. Moreover, when it is necessary to adjust and replace two or more of any of the heads one, completely taking out the first tape path, and then replacing the second one.

Preparation:

 Mirror cassette CQ009C 8-909-708-01 (or CQ012C 8-909-708-02)

If one dose not have this, cut out the sections of a 120-minute cassette shell as indicated below and use that cassette.

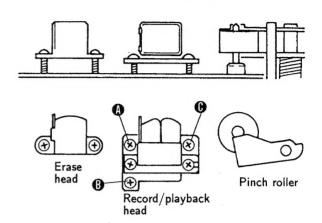

2. Phillips screwdriver (mediun-size):

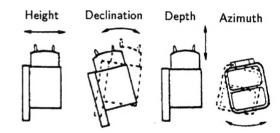

For the head adjustment screws

- 3. Pen light
- 4. WS-48B (3kHz, 0dB)
- 5. P-4-A100 (10kHz, -10dB)

Adsjutment Position: As seen from the cassette, side (top) and MD as seen head on (bottom).

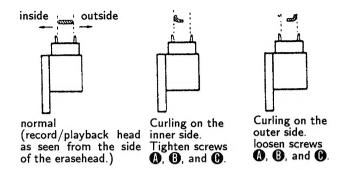

Definition of Terms: The figures are of a record/playback head.

Record/playback head

Note: Only perform this adjustment when the record/playback head is to be replaced.

- 1. Insert the mirror cassette and put the unit in record/playback mode.
- 2. (Height Adjustment) Check to see if the tape is curling at the tape guide of the head. If it is curling, tighten screws (1), (2), and (2), respectively by the same angle, moving the head so that it remains at the same angle throughout the procedure. If it curls on the bottom side of the mirror cassette (actually the inner side), tighten all the screws equally; but loosen them if the tape begins to curl on the top side (outer side).

3. (Declination Adjustment) While in the record/playback position, set the back tension to 0 (wind the supply reel with something thin like a pencil counterclockwise direction) and make sure there is no curling or shifting (shifting up/shifting down) at the guide of the record/playback head. Because shifting can only occur due to a difference in the width of the tape and that of the tape guides (curling will otherwise occur), it is necessary to pay close attention since it can be easily overlooked.

When there is a shift, tighten screws **3** and **4** equally and change the declination of the head. If it is shifting down, loosen them.

- 4. Repeat the adjustments in steps 2 and 3 and fine adjust the height and the declination.
- 5. (Preliminary Azimuth Adjustment)

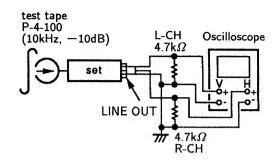

After demagnetizing and cleaning the adjustment head, play back WS-48B (3kHz, 0dB).

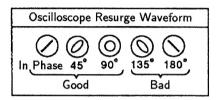

Turn screw **()** so that the reading on the level meter of the unit or that of the level meter connected to LINE OUT is maximized.

If the screw is turned at least half a revolution, repeat the adjustment from step 1.

- 6. (Tape Path Check) Connect the oscilloscope to LINE OUT and play back P-4-A100 (10kHz,
 - $-10 \mathrm{dB}$) to display a resurge waveform. After 20 seconds of record/playback (after the tension within the loop has been increased sufficiently), make sure the variation in the resurge is within \pm 90 degrees (within \pm 45 degrees is desired).

If the variation is greater than this, it is because the declination and/or the height adjustments from step 1.

TORQUE MEASUREMENT

Torque	Torque meter	Meter reading 28 - 60g.cm (0.39 - 0.83oz. inch)		
FWD	CQ-102C			
FWD Back tension	CQ-102C	1 - 5g.cm (0.014 - 0.069oz. inch)		
FF, REW	CQ-201B	65 - 90g.cm (0.9 - 1.25oz.inch)		

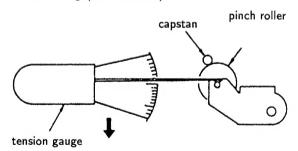

Pinch Roller Pressing Force Measurement

Mode: playback

Hook needle of the tension gauge to the pinch roller shaft and push back pinch roller to detach it from capstan. Then, return it gradually to capstan and read the gauge when the pinch roller begins turnning.

Standard Limits:

210 - 320g (7.4 - 11.3oz)

2. ELECTRICAL ADJUSTMENT

Note: The adjustment should be performed in the order given in the service manual. As a rule, adjustments about playback should be performed before those about recording.

The adjustment should be performed before for both L-CH and R-CH.

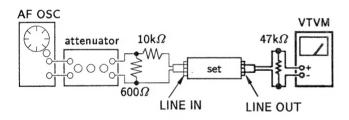

Switches and controls should be set as follows unless otherwise specified.

DOLBY NR switch: OFF MPX FILTER switch: OFF TAPE/SOURCE switch: Tape

Standard Record:

Deliver the standard input signal level to the input jack and set the REC LEVEL control to obtain the standard output signal level.

- Record Mode -

Standard Input Level

input terminal	LINE IN
source impedance	$10\mathrm{k}\Omega$
input level	0.25V (-10dB)

Standard Output Level

output terminal	LINE OUT	
load impedance	$47\mathrm{k}\Omega$	
output level	0.35V (-7.7dB)	

Test Tape

	1	
Type	Signal	Used for
P-4-A100	10kHz, -0dB	Azimuth Adjustment
P-4-L300	315Hz, 0dB	PB Level Adjustment
WS-48B	3kHz, 0dB	Tape Speed Adjustment

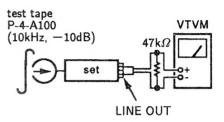

Test Mode

This set will get into test mode by shortung the pins of TP803 on Audio system control board before turning the power on.

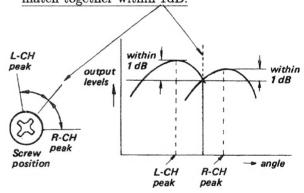

Record/Playback Head Azimuth Adjustment

Porcedure:

1. Mode: FWD playback

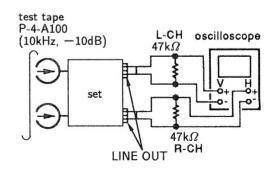

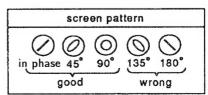

2. Turn the adjustment screw for the maximum output levels. If these levels do not match, turn the adjustment screw until both output levels match together within 1dB.

3. Phase Check

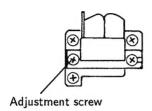

Mode: playback

4. After the adjustment, lock the screws with locking compound.

Adjustment Location: Record/Playback head

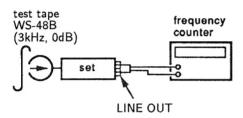

Tape Speed Adjustment

Setting:

Test pin TP803 short

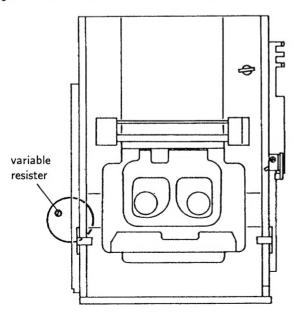

Procedure:

Mode: playback

- 1. Set to playback mode.
- 2. Adjust motor rear side (variable resister) so that the frequency counter reading becomes $3,000 \pm 15$ Hz.

Adjuttment Location: motor rear side.

Playback Level Adjustment

Procedure:

Mode: playback
test tape
P-4-L300
(315Hz, 0dB)

set

LINE OUT

Adjust RV121 (L-ch) and RV221 (R-ch) so that the reading on VTVM meets the adjustment limits below.

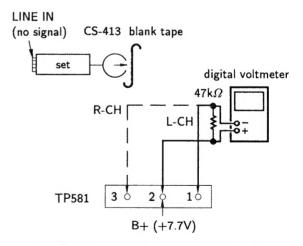

Adjustment Limits:

LINE OUT level: -7.7 \pm 0.5dB (0.33 - 0.37V) Level difference between channels: less than 0.5dB. Check that the LINE OUT level does not change even if Playback and Stop operation is repeated several times.

Adjustment Location: Audio system control board

Bais Consumption current Adjustment

Procedure:

- 1. Set RV181 and RV281 to mechanical center and turn the set recording mode.
- 2. Connect digital voltmeter as shown by the following table.
- 3. Adjust the following transformers for the minimum readings on the digital voltmeter.

	Mesurement Point	Adjustment Part	Value
L-ch	① and ②, TP581	T181	not more than
R-ch	③ and ②, TP581	T281	200mV

Adjustment Location: Audio system control board

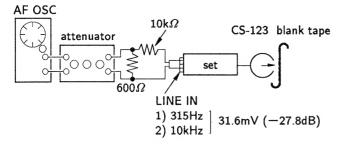

Record Bias Adjustment

Setting:

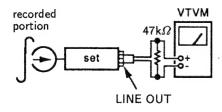

REC LEVEL control: Standard Record (see page). test pin TP803: short

Procedure:

1. Mode: record

1. Mode: playback

Playback the signal recorded in step 1.

Confirm that the 10kHz playback output is 0 ± 0.5 dB relative to the 315Hz output. If necessary, adjust RV181 (L-ch) and RV281 (R-ch) for repeat the steps given above.

Adjustment Location: Audio system control board

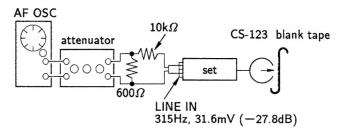

Record Level Adjustment

Setting:

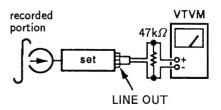

REC LEVEL control: Standard Record (see page) test pin TP803: short

Procedure:

1. Mode: record

2. Mode: playback

Playback the signal recorded in step 1.
 Confirm that the signal level is within the adjustment limits below. If necessary, adjust RV 141 (L-ch) and RV241 (R-ch) repeat the step 1 2.

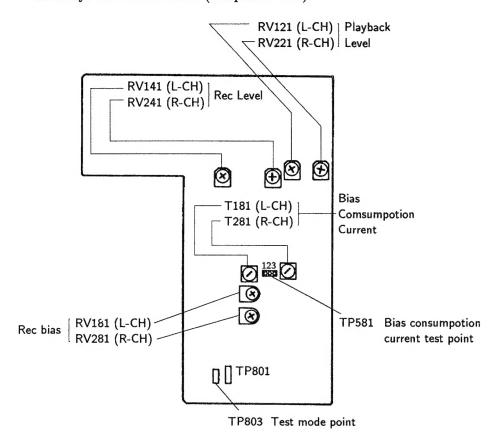

Adjustment Limits:

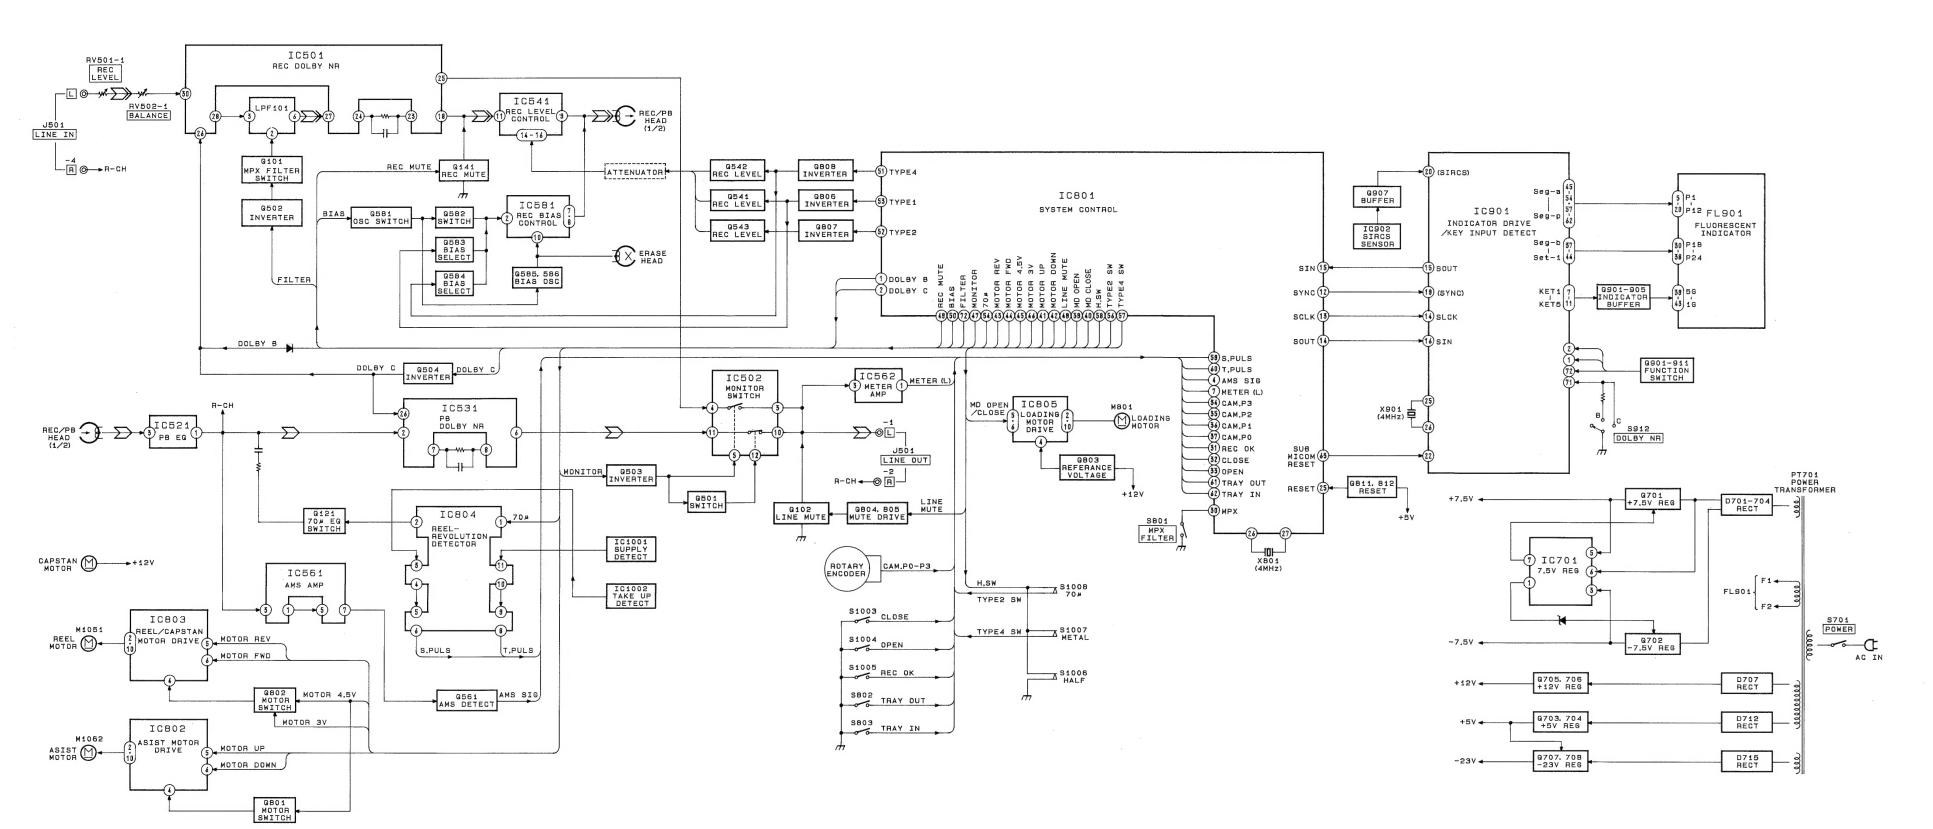

-27.8dB ± 0.5 dB (29 to 33.4mV)

Adjustment Location: Audio system control board

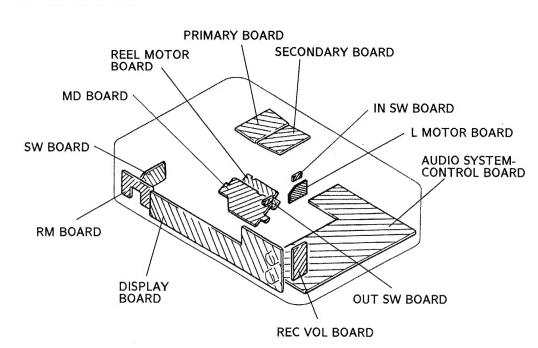

Adjustment Location

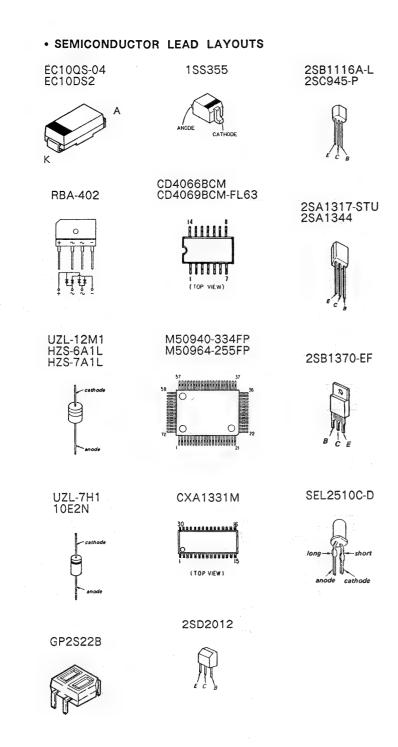

- Audio system control board (component side) -

SECTION 4 EXPLODED VIEWS

NOTE:

- -XX, -X mean standardized parts, so they may have some differences from the original one.
- The construction parts of an assembled part are indicated with a collation number in the remark column.
- Color indication of Appearance Parts Example:

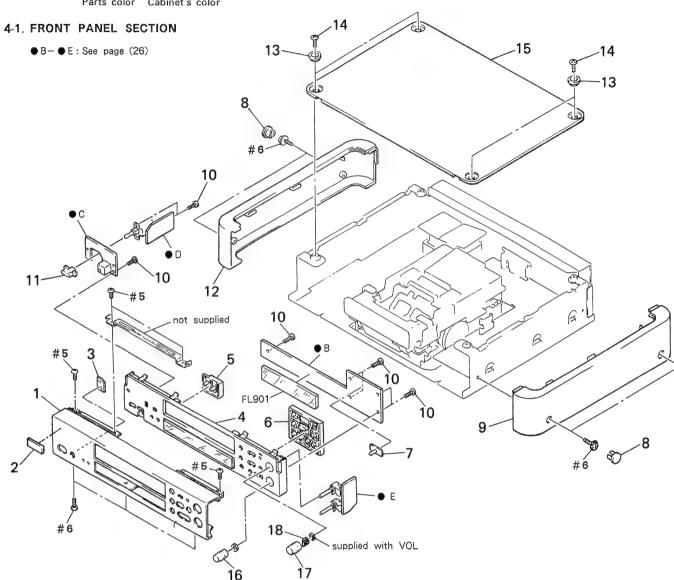

KNOB, BALANCE (WHITE)....(RED)

Parts color Cabinet's color

 Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

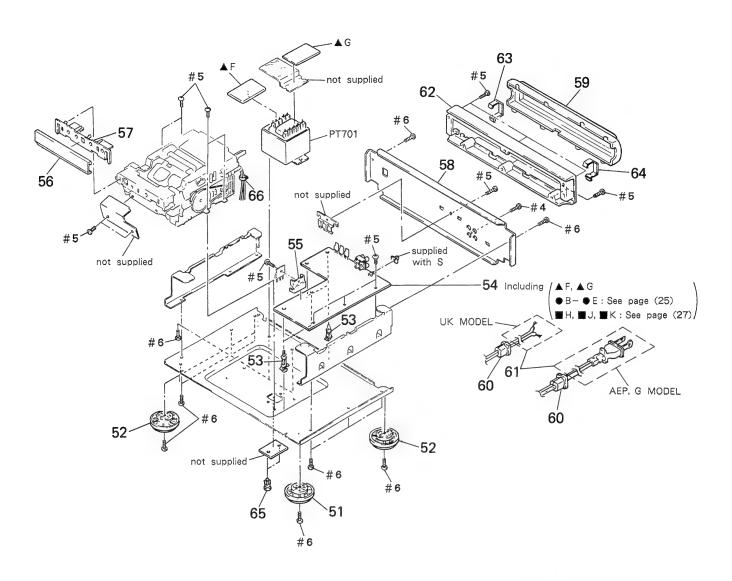

- The mechanical parts with no reference number in the exploded views are not supplied.
- Hardware (# mark) list is given in the last of this parts list.

The components identified by mark \bigwedge or dotted line with mark \bigwedge are critical for safety. Replace only with part number specified.

SECTION 5 ELECTRICAL PARTS LIST

NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- RESISTORS

All resistors are in ohms METAL: Metal-film resistor

METAL OXIDE: Metal Oxide-film resistor

F: nonflammable

 Items marked "*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

• SEMICONDUCTORS

In each case, u: μ , for example: uA....: μ A....: μ A.....: μ PA.... uPB....: μ PC.... uPB....: μ PD.... uPD....: μ PD....

- CAPACITORS uF: μF
- COILS uH: μH

The components identified by mark A or dotted line with mark A are critical for safety.
Replace only with part number specified.

When indicating parts by reference number, please include the board name.
